

MIN KHANT SOE OKE

BACKEND DEVELOPER | DATA ANALYST

BACKEND SYSTEMS

DATA ANALYSIS

TEL +48 572 581 007

EMAIL alexminkhant007@gmail.com

LINKEDIN linkedin.com/in/minkhantsoeoke

LOCATION Krakow, Poland (Available to relocate)

CORE SKILLS

- Backend development
- REST API design
- Third-party integrations
- Identity and access management
- High-concurrency systems
- Database design
- Data analysis
- Data visualization
- SQL reporting
- Machine learning
- RAG pipelines
- Performance optimization
- Workflow automation
- Quality assurance
- Cross-functional teamwork

LANGUAGES

English C1

Burmese Native

EDUCATION

BSc in Computer Science

AGH University of Science and Technology

TOOLS

- Python | FastAPI
- SQL | PostgreSQL
- Keycloak | RBAC
- Tableau | Pandas
- Vector databases | RAG
- Git | Linux
- Claude | Cursor | Codex

PROFILE

Backend developer and data analyst with a BSc in Computer Science and experience building secure, high-concurrency APIs, AI-assisted retrieval systems, and data-driven reporting solutions. Skilled in Python, FastAPI, SQL, authentication and access control, system integration, and performance optimization. Experienced in translating technical requirements into reliable services and measurable improvements across remote, international teams.

TECHNICAL EXPERTISE

Build modular backend services, secure identity and access workflows, and data pipelines that combine structured and vector data. Use Python and SQL for automation, analysis, and reporting, with practical experience improving reliability, processing performance, and decision support.

EXPERIENCE

Software Backend Developer

CyfroSec | May 2025 - Present

Develop secure, high-concurrency backend and AI systems for a remote cybersecurity startup.

- Developed high-concurrency FastAPI backends integrated with Keycloak IAM and RBAC policies to support zero-trust security for high-traffic workloads
- Architected a modular extensibility layer (MCP) for third-party tool integration and rapid feature deployment without core-system downtime
- Optimized Hybrid RAG pipelines using vector databases and structured data to deliver high-precision, low-latency context for AI security analysis

Data Analyst

Ayar Yadanar Co Ltd | June 2022 - December 2023

Analyzed operational data and built visualization, forecasting, and reporting solutions for a remote organization in Yangon, Myanmar.

- Created and optimized data visualizations using Python and Tableau, enabling stakeholders to make informed decisions
- Analyzed large datasets to identify operational-performance trends, improving process efficiency by 12%
- Built statistical models for resource-allocation forecasting, reducing operational costs by 10%
- Streamlined data collection and reporting workflows with SQL and automation tools, improving reliability and cutting processing time by 20%
